Hello,

I would like to comment on the CA Building Standards Code sections for bicycle parking, but to save my life I can't find the text of the proposed regulations on the CBSC website. I would like to comment that any bicycle parking requirements not solely rely on any bicycle parking infrastructure that requires an individual to lift their bicycle (even only the front wheel) in order to park. My daily driver is a 1960s-era Schwinn Varsity and it weighs approximately 40 lbs; I cannot lift it, and there are a number of buildings around the capitol that have only those types of bicycle parking stands. It is frustrating.

Many thanks,

Sarah
